

MUHAMMAD HASAAN

BI DEVELOPER | DATA ANALYST | ETL & AUTOMATION SPECIALIST

Rawalpindi, Pakistan | +92 333 1716827 | muhammadhasaanali01@gmail.com | LinkedIn | Portfolio

EDUCATION

Virtual University

BSCS (Expected 2027)

PROFESSIONAL SKILLS

Data Visualization & BI Tools:

Power BI, Power BI Report Builder, Power Apps, Microsoft Fabric

Databases & ETL:

SQL, PostgreSQL, SSMS, Data Warehousing, ETL Pipelines, Data Transformation & Cleaning

Programming & Automation:

Python, Flask, pandas, SQL, Git, Ubuntu, N8N, OpenClaw, Power Automate

AI & Emerging Tech:

Gen-AI Workflows, RAG Concepts, LangChain, CrewAI, Azure OpenAI, GCP

Other Skills:

Agile Methodology, Problem Solving, Time Management

PROFILE SUMMARY

BI Developer & Data Analyst specializing in enterprise data solutions, automated pipelines, and AI-powered workflows. Architected semantic models, ETL pipelines, and real-time dashboards for HR, Finance, QA, and DevOps. Expert in Power BI, SQL, Python, and n8n automation. Proven track record: 700+ hours saved annually through automated data pipelines and AI-driven workflows.

PROFESSIONAL EXPERIENCE

Data Analyst

2024 – Present

Consultancy Outfit

- Developed and maintained Power BI semantic models for HR, Finance, QA, and DevOps with advanced DAX measures, complex relationships, Row-Level Security (RLS) for role-based data access (HODs, team leads, employees), and drill-through functionality.
- Built and maintained end-to-end data pipelines integrating APIs (Jira, GitHub, Time Doctor), SQL databases, and Excel into centralized reporting systems.
- Integrated Power Apps into business workflows, automating leave approvals and employee request processes reducing manual intervention.
- Created paginated reports and multi-page dashboards with KPIs, sprint/task status, productivity metrics, attendance/leave, and financial data driving faster decision-making across all departments.
- Monitored data model performance, optimized gateway and refresh schedules, and ensured pipeline reliability with automated alerting on failures.
- Designed and implemented AI-driven automation workflows using n8n across HR, recruitment, payroll, and employee engagement.
- Collaborated with AI engineers to build data preparation pipelines, develop RAG-based systems, and support AI workflows, including prompt engineering and Flask-based application development.

KEY PROJECTS

Department Wise Centralized Power BI Dashboard

Developed an enterprise-grade Power BI solution integrating SQL, APIs (Jira, GitHub, Time Doctor), MongoDB, and Excel into a centralized data warehouse.

- Built automated ETL pipelines for centralized data warehouse and optimized data models for real-time analytics.
- Implemented RLS for HODs, team leads, and employees to control data visibility.
- Delivered live departmental dashboards for PMO, HR, Finance, QA & DevOps, covering KPIs, Sprint/Project/Tasks Status, productivity, finances, and attendance.

Impact: Improved reporting efficiency and enabled faster, data-driven decision-making across departments.

Courses Data Dashboard & AI Chatbot Integration

Developed a unified Power BI + AI chatbot system with 40+ interrelated tables to deliver course analytics and AI-powered insights.

- Designed galaxy schemas and modeled data in SQL and Power BI.
- Built multi-page dashboards with KPIs, drill-down visuals, and engagement insights.
- Created dual AI models (SQL-based querying and semantic search using embeddings).

—Created a ChatGPT-style Power Apps chatbot integrated with Power Automate in Power BI for real-time Q&A and recommendations.

Impact: Enabled personalized insights and AI-driven course recommendations.

Leave Management System – Power Apps

Developed a comprehensive Leave Request Application using Power Apps to digitize and streamline the leave management process across the organization, ensuring efficiency, transparency, and a better employee experience.

- Automated workflow routing from Employee → Manager → HR for seamless approvals.
- Integrated real-time leave balance tracking using a backend database.
- Triggered automated email notifications at every approval stage.
- Built a Power BI dashboard for HR to monitor leave trends and balances.

Impact: Cut HR workload and improved transparency through self-service automation.

AI-Powered HR & Recruitment Automation (n8n)

Tech Stack: n8n, APIs, SQL, AI Models, Email & LinkedIn Automation

Built an AI-driven automation platform to streamline HR operations and recruitment.

- Automated attendance evaluation, leave classification, and policy enforcement.
- Extended attendance intelligence into automated payroll and deduction calculations with email-based summaries.
- Developed AI-powered recruitment workflows for JD generation, CV parsing, candidate matching, assessments, and automated communication.
- Automated employee engagement via LinkedIn birthday and anniversary posts.

Impact: Saved 700+ hours annually, reduced hiring cycle time from days to minutes, and improved payroll accuracy and policy compliance.
