

MUHAMMAD HASAAN

BI Developer & Data Engineer | ETL & Automation Specialist

Rawalpindi, Pakistan | +92 333 1716827 | muhammadhasaanali01@gmail.com | linkedin.com/in/hasaan-ali | github.com/hasaanali009

PROFESSIONAL SUMMARY

Results-driven BI Developer and Data Engineer building end-to-end data solutions, automated pipelines, and enterprise-grade dashboards. Skilled in transforming raw data from APIs, databases, and files into structured, analytics-ready models using Power BI, SQL, Python, and cloud infrastructure. Experienced in AI-powered automation workflows, data warehousing, and semantic modeling with advanced DAX, Row-Level Security, and complex relationships. Proven track record delivering cross-departmental analytics platforms that drive faster, data-driven decision-making.

TECHNICAL SKILLS

Data Visualization & BI: Power BI, Power BI Report Builder, DAX, Power Query, Microsoft Fabric

Databases & ETL: SQL Server, PostgreSQL, SSMS, MongoDB, Data Warehousing, ETL Pipelines

Cloud & AI: Azure OpenAI, AWS (EC2, S3, IAM, CloudTrail, Billing), GCP

APIs & Integration: Jira API, GitHub API, Time Doctor API, REST APIs, Boto3

Low-Code / No-Code: Power Apps, Power Automate, n8n

Programming: Python, Flask, pandas, Git, Ubuntu

Data Modeling: Star Schema, Galaxy Schema, Row-Level Security, Data Transformation

AI & Automation: Gen-AI Workflows, RAG, LangChain, CrewAI, OpenClaw

PROFESSIONAL EXPERIENCE

Data Analyst - Consultancy Outfit

2024 - Present

Rawalpindi, Pakistan

- Developed and maintained Power BI semantic models for HR, Finance, QA, and DevOps with advanced DAX measures, complex relationships, Row-Level Security for role-based data access, and drill-through functionality
- Built and maintained end-to-end data pipelines integrating APIs (Jira, GitHub, Time Doctor), SQL databases, and Excel into centralized reporting systems
- Integrated Power Apps into business workflows, automating leave approvals and employee request processes, reducing manual intervention
- Created paginated reports and multi-page dashboards with KPIs, sprint and task status, productivity metrics, attendance and leave tracking, and financial data, driving faster decision-making across all departments
- Monitored data model performance, optimized gateway and refresh schedules, and ensured pipeline reliability with automated alerting on failures
- Designed and implemented AI-driven automation workflows using n8n across HR, recruitment, payroll, and employee engagement
- Collaborated with AI engineers to build data preparation pipelines, develop RAG-based systems, and support AI workflows, including prompt engineering and Flask-based application development

KEY PROJECTS

Department-Wise Centralized Power BI Dashboard

Power BI | SQL | Python | Jira API | GitHub API | Time Doctor API | MongoDB | Excel

- Developed an enterprise-grade Power BI solution integrating SQL, APIs, MongoDB, and Excel into a centralized data warehouse
- Built automated ETL pipelines for centralized data warehouse and optimized data models for real-time analytics

- Implemented Row-Level Security for department heads, team leads, and employees to control data visibility
- Delivered live departmental dashboards for PMO, HR, Finance, QA, and DevOps, covering KPIs, sprint and project status, productivity, finances, and attendance
- Improved reporting efficiency and enabled faster, data-driven decision-making across departments

Courses Data Dashboard & AI Chatbot Integration

Power BI | Azure OpenAI | Python | SQL | Power Apps | Power Automate | Vector Embeddings

- Developed a unified Power BI and AI chatbot system with interrelated tables to deliver course analytics and AI-powered insights
- Designed galaxy schemas and modeled data in SQL and Power BI
- Built multi-page dashboards with KPIs, drill-down visuals, and engagement insights
- Created dual AI models for SQL-based querying and semantic search using vector embeddings
- Built a ChatGPT-style Power Apps chatbot integrated with Power Automate in Power BI for real-time Q&A and recommendations
- Enabled personalized insights and AI-driven course recommendations

Leave Management System - Power Apps

Power Apps | Power Automate | SharePoint | Power BI

- Developed a comprehensive Leave Request Application using Power Apps to digitize and streamline the leave management process
- Automated workflow routing from Employee to Manager to HR for seamless approvals
- Integrated real-time leave balance tracking using a backend database
- Triggered automated email notifications at every approval stage
- Built a Power BI dashboard for HR to monitor leave trends and balances
- Cut HR workload and improved transparency through self-service automation

AI-Powered HR & Recruitment Automation

n8n | APIs | SQL | AI Models | Email & LinkedIn Automation

- Built an AI-driven automation platform to streamline HR operations and recruitment
- Automated attendance evaluation, leave classification, and policy enforcement
- Extended attendance intelligence into automated payroll and deduction calculations with email-based summaries
- Developed AI-powered recruitment workflows for job description generation, CV parsing, candidate matching, assessments, and automated communication
- Automated employee engagement via LinkedIn birthday and anniversary posts
- Saved significant manual hours annually, reduced hiring cycle time from days to minutes, and improved payroll accuracy and policy compliance

Multi-Account AWS & GitHub DevOps Analytics Platform

AWS | Python | Boto3 | GitHub API | Power BI | DAX | CloudTrail

- Built a unified analytics platform consolidating multi-account AWS infrastructure data and GitHub CI/CD metrics into a single Power BI dashboard
- Developed Python extraction layer handling cross-account AWS authentication, GitHub API pagination, rate limiting, and schema differences
- Designed star-schema data model with separate fact tables for AWS services and GitHub workflows
- Implemented cost optimization, security compliance, and operational efficiency monitoring across AWS accounts

Automated Attendance & Leave Reporting System

SQL | Power BI | Python | Stored Procedures | Report Builder | SQL Agent

- Built Python and SQL ETL scripts extracting biometric punch data from multiple office locations, transforming into structured attendance records
- Designed Power BI Report Builder templates and configured automated email delivery through SQL Server Agent

- Replaced fully manual process with automated workflow including leave management integration and quota tracking
- Reduced HR manual reporting effort significantly through automated data consolidation and scheduled report delivery

EDUCATION

Virtual University of Pakistan - Bachelor of Science in Computer Science (BSCS)

Expected 2027

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300) - In Progress
